## IPv6

Posted by Beardy - 2008/06/16 04:49

---

Greetings idiots (what a way to start a post),

I realise it's a very broad and complicated topic, but I'd love to hear your thoughts on implementing IPv6 support in your network at some stage. It's the sort of thing I could easily imagine being done on a brand new network, but bringing it into an existing IPv4 network is a headache a lot of IT admins will be facing sometime in the future, so I'd be very interested to see if you could work it in somehow.

Just an idea! Keep up the brilliant work. I'm quite new to your podcasts but I've watched a dozen in the last couple of days and I'm learning so so much already. Marvellous job, guys.

Ditto here, maybe mixed in with some more 2008 content.

Absolutely, it'd be a wonderful thing to see set up in a Server 2008 situation. Can't picture Server 2003 being too happy with it somehow...
