
Speed up Vista startup

Posted by Jon - 2008/07/25 00:28

I apologise that I cannot remember the episode number but in one episode Nicky mentioned that he needed to modify the Vista boot for a company so that it would boot in 30 seconds. I believe he was able to achieve a boot time of approx 35 seconds. I would like to know this was achieved as I am currently building a Vista SOE for my company.

Hi Jon,

I gotta admit I kinda had a little help from the hardware on this one. To boot up this quickly we had a clean install on a Lenovo Thinkpad X300 with solid state drive,

Cheers

Nicky

Nicky,
Thanks for the reply....I'm currently trying to configure it on a Toshiba R400 tablet. I found that when I restore to the out of the box settings, the windows updates seems to put the laptop in a hole that it cannot dig itself out of....the laptop reboots and brings up a screen saying:
"Configuring updates"

I have tried to leave it there but two hours later it is still there....am not sure what to do next.....

Thanks.
Jon

Hi Jon,

Are you using the integrated SP1 source?

Nicky
