
a tip for Ep.47 BDD2007

Posted by mark - 2008/10/02 13:08

if you are following along with the BDD2007 episode, when you have grabbed your xp sp2 source files and want to get all the hotfixes from service pack 2 onwards, try this website:

www.ryanvm.net/msfn/updatepack-sp2.html

you download the integrator program and the latest "Post-SP2 Update Pack".

fire up the integrator program -

* point to the c:\distribution\operating systems\windows xp professional sp2\i386 folder that BDD2007 created.

* point to the post-sp2 update pack you downloaded

the integrator program will then go about streamlining in all the post-sp2 hotfixes for you!

how painless is that? that's my kind of IT
